## APPOINTMENTS ARE RECOMMENDED

Call the Immunization Hotline at **(715) 743-5292** to determine which vaccines your child(ren) is (are) due for.

# Common Concerns

## Why Vaccinate?

The diseases vaccines prevent can be dangerous, or even deadly. Statistically, the chances of your child getting diseases such as measles, or another vaccine-preventable disease might be low, and your child might never need the protection vaccines offer. Think of it this way: You always make sure to buckle your child in his car seat even though you don't expect to be in an accident.

## Vaccine Safety:

CDC and FDA take many steps to make sure vaccines are very safe both before and after the public begins using the vaccine.

## Vaccine Side Effects:

Like any medicine, vaccines can cause side effects such as low-grade fever, or pain and redness at injection site. Mild reactions go away within a few days on their own. Severe, long lasting side effects are extremely rare.

## Combination & Multiple Vaccines:

Receiving combination vaccines and/or multiple vaccines at the same time is safe and offers protection against multiple diseases during one office visit.

## VACCINES FOR CHILDREN (VFC) ELIGIBILITY TERMS

### Medicaid eligible:

A child who is eligible for the Medicaid program  
(For the purposes of the VFC program, the terms "Medicaid-eligible" and "Medicaid-enrolled" are the same and refer to children who have health insurance covered by a state Medicaid program)

### Uninsured:

A child who has no health insurance coverage

### American Indian or Alaska Native:

As defined by the Indian Health Care Improvement Act (**25 U.S.C. 1603**)

### Underinsured:

Has health insurance, but the coverage does not include all vaccines or only covers selected vaccines. Speak with your local health department for specific eligibility requirements.
